Operating and installation instructions for washer-extractor PW 6080 Vario

To avoid the risk of accidents or damage to the machine it is essential to read these instructions before it is installed and used for the first time.
Caring for the environment

Disposal of the packing material

The transport and protective packing has been selected from materials which are environmentally friendly for disposal and should be recycled.

Ensure that any plastic wrappings, bags, etc. are disposed of safely and kept out of the reach of babies and young children. Danger of suffocation.

Disposing of your old machine

Electrical and electronic machines often contain materials which, if handled or disposed of incorrectly could be potentially hazardous to human health and to the environment. They are, however, essential for the correct functioning of your machine. Please do not therefore dispose of it with your general waste.

Energy saving tips

Energy and water consumption

– Water consumption and energy usage are determined by the size of the load. To make the most out of your machine load the maximum dry load for the programme you are using.

Detergent

– Do not exceed the amounts of detergent recommended by the manufacturer on the packaging.

– Reduce the amount of detergent for smaller loads.

When drying with a tumble dryer

Selecting the highest possible spin speed for the wash programme will save energy when drying in a tumble dryer afterwards.

Please contact your local community waste collection/recycling centre for advice. Ensure that it presents no danger to children while being stored for disposal.

Technical data ................................................... 62
It is **essential** to read these instructions.

This machine conforms to current safety requirements. Inappropriate use can, however, lead to personal injury and damage to property.

To avoid the risk of accidents and damage to the machine, please read these instructions carefully before using it for the first time. They contain important information on its safety, use and maintenance.

Keep these instructions in a safe place and ensure that they are made available to new users.

They must be made aware of these warning and safety instructions.

**Intended use**

Only use the machine to wash items which are specified by the manufacturer to be machine-washable on the wash-care label. Any other applications may be dangerous. The manufacturer cannot be held liable for damage resulting from incorrect or improper use or operation of the machine.

This machine must be used as described in these operating instructions and must be checked on a regular basis to make sure it is functioning correctly. Maintenance must be carried out when necessary.
The machine is suitable for indoor use only.

This machine is not intended for use by people with reduced physical, sensory or mental capabilities, or lack of experience or knowledge, unless they have been shown how to use it correctly by a person responsible for their safety.

Keep children away from the machine at all times. It is not a toy! To avoid the risk of injury do not allow children to play on or near it or to play with its controls. Supervise its use by the elderly or infirm, and supervise children whilst you are using it.

If the machine is used in a publically accessible room, it is the supervisor’s responsibility to ensure that suitable measures are in place which enable operators to use it safely.

It is the operator’s responsibility to ensure that the standard of disinfection in thermal as well as chemo thermal procedures is maintained (in accordance with local authority regulations) by carrying out suitable validation tests. Disinfection programmes must not be interrupted, as this can have a limiting effect on the disinfection result.
Warning and Safety instructions

Technical safety

Before setting up the machine, check it for any externally visible damage. Do not install or use a damaged machine.

The electrical safety of this machine can only be guaranteed when it is correctly earthed. It is most important that this basic safety requirement is observed and regularly tested, and where there is any doubt the on-site wiring system should be inspected by a qualified electrician. The manufacturer cannot be held liable for the consequences of an inadequate earthing system (e.g. electric shock).

Unauthorised repairs could result in unforeseen dangers for the user, for which Miele cannot accept liability. Repairs should only be undertaken by a Miele service technician. If this is not done any resultant damage will not be covered by the guarantee. Ensure current is not supplied to the machine until after maintenance or repair work has been carried out.

Do not make any alterations to the machine, unless authorised to do so by Miele.

In the event of a fault or for cleaning purposes, the machine must be disconnected from the electricity supply.

– it is switched off at the wall socket and the plug is withdrawn, or
– it is switched off at the mains, or
– the screw-out fuse is removed (in countries where this is applicable).
Warning and Safety instructions

This machine must only be connected to the on-site water supply using a hose that is in good condition. Old hoses must not be re-used. Check the hose regularly for signs of wear. Change in good time to avoid the risk of leaks and subsequent damage.

Faulty components must only be replaced by genuine Miele original spare parts. Only when these parts are fitted can the safety standards of the machine be guaranteed.

Do not use force to open the drum door. The door handle is fitted with a safety device to ensure that the door lock functions correctly.

This machine is intended for stationary use only.
Correct use

Do not install your machine in rooms where temperatures below freezing may occur. Frozen hoses may burst or split. The reliability of the electronic control unit may be impaired at temperatures below freezing point.

Turn off the stopcock if the machine is to be left for any length of time (e.g. holiday), especially if there is no floor drain (gully) in the immediate vicinity.

Before using the machine for the first time, check that the transit bars at the rear of the machine have been removed (see section on "Installation"). During spinning, a transit bar which is still in place may result in damage to both the machine and adjacent furniture or appliances.

Flooding danger.
If hooking the drain hose into a wash basin, check that the water can drain off quickly enough to prevent the sink from overflowing. Make sure the drain hose is secure, so that the force of the water flowing out of the hose does not dislodge it.

Take care to ensure that foreign objects (e.g. nails, pins, coins, paper clips) do not find their way into the machine with the laundry. Shake out wash cloths before placing them in the machine to ensure that any coarse or harmful residues are removed. These may damage components of the machine (e.g. suds container, drum), which in turn can result in damage to the laundry.

If the correct amount of detergent is dispensed, the machine should not need to be descaled. If, however, you do wish to descale the machine only use proprietary non-corrosive descaling agents and strictly observe the instructions on the packaging. A special descaling agent is available to order from the Miele Spare Parts Department. Follow the usage instructions on the packaging carefully.
Textiles which have been pre-treated in solvent based cleaning agents must be thoroughly rinsed in clean water before being washed in this machine.

Never use solvent based cleaning agents in this machine, as this may result in damage to component parts and create toxic fumes. Such agents also pose a fire and explosion hazard.

Benzine, petrol, paraffin or any easily flammable liquid must not be stored or used near this machine. Fire and explosion risk!

Only use dyes specified by the manufacturer as being suitable for use in a washing machine. Always observe the manufacturer's instructions carefully.

Colour run and dye removers contain sulphur compounds which can cause damage such as corrosion. Do not use these products in this machine.

Avoid contact of stainless steel surfaces (front, lid, casing) with liquid cleaning and disinfecting agents which contain chlorine or sodium hypochlorite. These agents can have a corrosive effect on stainless steel. Aggressive vapours containing chlorine bleach can also be corrosive. Do not store open containers of these agents near the machine.

Do not use a pressure washer or hose to clean the machine.

It is particularly important to observe manufacturer's instructions when using a combination of cleaning agents and special application products. Only use the product for the application described by the manufacturer, to avoid any material damage or the occurrence of strong chemical reactions.
Chlorine and component damage

Notes on using chlorine bleach and perchlorethylene

Frequent use of chlorine increases the risk of component damage.

The use of agents containing chlorine, such as sodium hypochlorite and chlorine bleach in powder form, can damage the protective upper surface of stainless steel and cause corrosion to components. Factors affecting this are chlorine concentration levels, contact time and temperature. It is therefore advisable to avoid the use of such agents. Oxygen based bleaching agents should be used instead.

If, however, chlorine based bleaching agents have to be used for particular types of soiling, then anti-chlorine measures must also be carried out. If this is not done irreparable damage can occur to components in the machine and to laundry.

Anti-chlorine treatment

Anti-chlorine treatment has to be carried out immediately after chlorine bleach has been used. The use of hydrogen peroxide or an oxygen based cleaning or bleaching agent is recommended and the laundry should not be drained in between.

With thiosulfate, especially when used with hard water, gypsum can form, which can lead to incrustations on laundry or deposits in the machine. The use of hydrogen peroxide is preferable as it aids the chorline neutralising process.

The exact quantity of additives and the treatment temperatures required must be set and tested on site in accordance with the dosage recommendations of the detergent and additive manufacturers. The laundry must also be tested to check whether it contains any active chlorine residues.
**Warning and Safety instructions**

**Accessories**

- Accessory parts may only be fitted when expressly approved by Miele. If other parts are used, guarantee, performance and product liability claims will be invalidated.

**Disposing of your old machine**

- Before disposing of an old machine it is important to disable the door lock. This way you will prevent the risk of children accidentally locking themselves in and endangering their lives.

Miele cannot be held liable for damage caused by non-compliance with these Warning and Safety instructions.
Operating the machine

Control panel

1 Display
See the following pages for more information.

2 Short cut buttons
For selecting an individual programme quickly. These buttons can be re-programmed to select your favourite wash programmes instead of the pre-set ones.

3 Start button

4 PC / Optical interface
This is used by service technicians for testing purposes and for uploading new software to the machine.

5 Multi-function selector
This is used to select menu options (by turning it) and to confirm your selection (by pressing it).

6 On-Off button

Before using for the first time

Before using the machine for the first time ensure that it is correctly installed and connected. See "Installation". Also check that the drain filter is securely tightened to prevent the risk of water leaks during use.

Commission the appliance as described in the separate booklet "Commissioning, Programme chart and Settings" supplied
Operating the machine

Display

Entry menu

<table>
<thead>
<tr>
<th></th>
<th>Programme Selection...</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Cottons Uni. 60°C</td>
</tr>
<tr>
<td>2</td>
<td>Minimum iron 40°C Settings</td>
</tr>
<tr>
<td>3</td>
<td>Delicates 40°C</td>
</tr>
<tr>
<td>4</td>
<td>Woollens 30°C 10:00</td>
</tr>
</tbody>
</table>

When the machine is switched on, the entry menu (with four favourite programmes listed) appears and *Programme selection* is highlighted.

Multi-function selector

**Turning** the multi-function selector moves the highlighting to the next option.

**Pressing** the multi-function selector selects the highlighted option.

Short cut buttons

Pressing a short cut button selects one of the four favourite programmes shown on the left of the display.

If you wish to change the programmes shown in this list you can do so (see "Saving a favourite programme" for more information).

The short cut buttons have different functions in the other menus. Where this is the case, an arrow \( \downarrow \) will appear in the display above the short cut button, together with a description of its function.

Programme selection

There are two ways of selecting a programme:

- **Option 1**: Select *Programme selection* from the display and press the multi-function selector.

- **Option 2**: Press short cut button \( 1, 2, 3 \) or \( 4 \). This will automatically take you into the main menu for that programme.
Operating the machine

Programme selection menu

<table>
<thead>
<tr>
<th>Programme selection</th>
<th>Cottons Hygiene ▲</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Cottons Uni.</td>
</tr>
<tr>
<td></td>
<td>Minimum iron</td>
</tr>
<tr>
<td></td>
<td>Delicates ▼</td>
</tr>
</tbody>
</table>

You can use the multi-function selector to select any programme. The highlighting will move up or down depending on the direction the multi-function selector is turned in.

The ▼▲ arrows on the right of the display, indicate further options.

Pressing the multi-function selector takes you to the main menu of the programme selected.

Wash programme main menu

<table>
<thead>
<tr>
<th>Cottons Uni.</th>

<th>1300 rpm</th>
</tr>
</thead>
</table>

Duration: 0:53 h

<table>
<thead>
<tr>
<th>Extras ▼</th>
<th>Timer ▼</th>
<th>Back ▼</th>
</tr>
</thead>
</table>

Turn the multi-function selector to highlight programme, temperature or spin speed. Pressing the multi-function selector selects the highlighted option and opens the relevant sub-menu.

The sub-menus Extras and Timer can be accessed by pressing the short cut button directly below them.

To go back to the entry menu press short cut button 4 below the word Back.

Alternatively, you can also highlight and confirm all options by just using the multi-function selector.

Settings menu

The Settings menu is used for altering standard settings. See the separate booklet ("Commissioning, Programme chart and Settings") supplied with the machine for further information on how to alter settings.
Operating the machine in wash-salon mode

The entry menu will vary depending on the Control setting selected.

The machine is operated either with the short cut buttons 1, 2, 3, 4 or the multi-function selector.

4 programmes are available to choose from. To specify which programmes are available go to the Settings/Supervisor level menu.

WS shortcut keys + Logo

12 programmes are available to choose from. To specify which programmes are available go to the Settings/Supervisor level menu.
1. Sort the laundry

Empty all pockets.

Foreign objects (e.g. nails, coins, paper clips, etc.) can cause damage to textiles and to components in the machine.

Removing marks

Badly soiled areas areas with e.g. blood, egg, coffee, tea can be pre-treated should be cleaned as soon as possible, preferably whilst still fresh. Spillages should be carefully dabbed off using a soft, colourfast cloth. Do not rub!

Badly soiled areas can be pre-treated with liquid detergent, stain removers etc. first, following the manufacturer’s instructions. With particularly stubborn stains ask Miele or your detergent manufacturer for advice.

Do not use solvent-based cleaning agents in this machine.

Sorting laundry

Sort the laundry by colour and by care label. Most garments have a textile care label in the collar or side seam.

Dark textiles often contain excess dye and should be washed separately several times before being included in a mixed load. Always wash whites and coloureds separately.

General tips

- Curtains: Remove lead weights first or place in a laundry bag.
- Underwiring and collar stiffeners: Any loose wiring in bras, shirt collar stiffeners, etc. should be removed or sewn in.
- Knitted garments, trousers and jeans, T-shirts and sweat shirts: Turn inside out, if recommended by the manufacturer.
- Close any zips, fasten hooks and eyes etc before washing.
- Fasten duvet covers etc. to prevent small items from being rolled up inside them.
- See the separate booklet "Commissioning, Programme chart and Settings" supplied with the machine for further tips.

Do not wash any items in this machine which are specified by the manufacturer as not washable on the care label. (🚫 symbol)

Items suitable for professional wet cleaning (🧼 garment care label symbol) may be washed in this machine.
2. Load the drum

- Switch the machine off with the On/Off button.
- To open the drum door pull on the handle.

Do not use force as it is fitted with a safety device to prevent it being opened by mistake. Forcing the door handle can cause damage to the locking mechanism (see “Problem solving guide, The door will not open”).

- Unfold the laundry and load loosely into the drum. Mixing both large and small items gives better wash results and also helps distribute the load evenly during spinning.

The most efficient use of energy and water is achieved when a full load is washed. However, do not overload as this causes creases and reduces cleaning efficiency.

- Close the drum door. Press the door firmly to shut it and then lock the handle in position. Do not slam the drum door.

⚠️ Make sure that no items are caught between the door and the drum.

3. Select a programme

- Select the most appropriate programme for the load being washed.

See the separate booklet supplied with the machine for an overview of which programmes are available.
## Garment care label symbols

### Washing

The figure quoted in the bucket is the maximum temperature the garment can be washed at. The number of bars under the symbol indicate the level of agitation permitted.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![95]</td>
<td>No bar under the symbol: = normal agitation</td>
</tr>
<tr>
<td>![60]</td>
<td>One bar under the symbol: = reduced agitation</td>
</tr>
<tr>
<td>![30]</td>
<td>Two bars under the symbol: = much reduced agitation</td>
</tr>
<tr>
<td>⚠️</td>
<td>Hand wash (if no temperature is specified use the lowest temperature or cold)</td>
</tr>
<tr>
<td>✖️</td>
<td>Do not wash</td>
</tr>
</tbody>
</table>

### Drying

The number of dots indicates the drying temperature

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![оде]</td>
<td>Normal temperature</td>
</tr>
<tr>
<td>![оде]</td>
<td>Low temperature</td>
</tr>
<tr>
<td>✖️</td>
<td>Do not tumble dry</td>
</tr>
</tbody>
</table>

### Ironing

The number of dots indicates the ironing temperature

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![åde]</td>
<td>Hot iron (max sole plate temp. approx. 200°C)</td>
</tr>
<tr>
<td>![åde]</td>
<td>Medium hot iron (max sole plate temp. approx. 150°C)</td>
</tr>
<tr>
<td>![درجة]</td>
<td>Cool iron (max sole plate temp. approx. 110°C). Do not steam iron garments carrying this symbol.</td>
</tr>
<tr>
<td>✖️</td>
<td>Do not iron</td>
</tr>
</tbody>
</table>

### Professional cleaning

Dry clean only. The letters indicate the type of cleaning agent required.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>F</td>
<td>Professional Wet Clean only</td>
</tr>
<tr>

<td>![40][30]</td>
</tr>
<tr>
<td>Woollens</td>
<td>![40][30]</td>
</tr>
<tr>
<td>Mini</td>
<td>![40][30]</td>
</tr>
</tbody>
</table>
It is very important to read both the "Notes and tips on laundry care" and "Garment care label symbols" sections before proceeding.

1. Sort the laundry
2. Load the drum

- Switch on the machine.

- Open the drum door.

- Unfold the laundry and load loosely into the drum.

- Make sure that no items are caught between the door and the drum.

- Close the drum door.
  1. Push the door shut.
  2. Then lock the handle in position.
Select a programme

Programme descriptions

– See the separate booklet “Commissioning, Programme chart and Settings” supplied with the machine for an overview of which programmes are available.

You can select a programme either by:

– using the appropriate short cut button to select one of the four programmes listed in the display (“favourites”), or

– you can select one from the Programme selection menu.

If required, you can then select any Extras and/or Timer for Delay start from the relevant sub-menu.

Payment system

If your machine is connected to a payment system, the amount of payment required will appear in the display.

If a programme is cancelled after it has started you can lose your credit (depending on how the machine was set up).
4 Add detergent

Take the level of soiling and water hardness into account.

Too little detergent results in:
- Laundry not getting properly clean, and with time may become grey and hard to the touch.
- Greasy particles clinging to laundry.
- Limescale deposits on the heater elements.

Too much detergent results in:
- Excessive foam which causes a low level of agitation and poor wash, rinse and spin results.
- A burden to the environment.

See "Detergent" for further information.

This machine is set up for connection to an optional external dispensing system for dispensing liquid agents (see "Detergent - External dispensing system").

- Pull out the detergent drawer and add detergent to the compartments as follows:
  - Detergent for the pre-wash
  - Detergent for the main wash
  - Fabric conditioner, liquid starch or proofing agent

- Close the detergent drawer.

The detergent drawer must not be opened during a programme. It must remain closed whilst the machine is in use.

The compartment is not used during Disinfection programmes. Do not put anything in the compartment.
Short instructions

5 Start the programme

The Start button will flash as soon as a programme can be started.

Press the Start button.

The Start button will now light up constantly.

The estimated programme duration will appear in the display. This will count down in one minute steps. During the first 10 minutes the machine measures how much water is being absorbed by the laundry. The programme duration may be shorter depending on this absorbency rate.

The programme sequence is also shown in the display. The machine lets you know which section of the programme has been reached.

Once washing is in progress, you can press the following short cut buttons:

- **Button 1 Extras** can be used to select or de-select extras.
- **Button 2 Timer** can be used to call up the current time of day and to see the estimated end time of the programme.
- **Button 4 Cancel** cancels the current programme. The suds are pumped away immediately.

6 Unload the drum

Finish will appear in the display.

- Open the drum door.
- Remove the laundry.

Check that all items have been removed from the drum. Items left in the drum could discolour other items in the next wash or become discoloured themselves.

- Close the drum door. Otherwise there is the danger of objects being placed inadvertently in the drum. If these remained unnoticed and were washed in the next load, they could damage the laundry.

- Switch the machine off using the On/Off button.
Selecting/Changing a Programme

Entry menu

1. Cottons Uni. 60°C
2. Minimum iron 40°C
3. Delicates 40°C
4. Woollens 30°C

Press short cut button 1.

Main menu

Cottons Uni. 60°C 1300 rpm
Duration: 0:53 h

Using the multi-function selector you can then highlight the following options in the display: Programme, Temperature or Spin speed and confirm your selection by pressing the multi-function selector.

Depending on the option highlighted, the following will be displayed:

– Programme selection

Use the multi-function selector to select the programme you want and confirm your selection. The main menu will reappear.
Selecting a programme

Note: If you do not make a selection in the sub-menu within approx. 15 seconds, the display will revert to the main menu.

– Temperature selection

<table>
<thead>
<tr>
<th>Cottons Uni.</th>
<th>60 °C</th>
<th>1300 rpm</th>
</tr>
</thead>
<tbody>
<tr>
<td>Temperature from</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Cold - 60°C</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

- Use the multi-function selector to select the temperature you want and confirm your selection. The main menu will reappear.

– Spin speed selection

<table>
<thead>
<tr>
<th>Cottons Uni.</th>
<th>60 °C</th>
<th>1300 rpm</th>
</tr>
</thead>
<tbody>
<tr>
<td>Spin speed from</td>
<td></td>
<td></td>
</tr>
<tr>
<td>0 - 1300 rpm</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

- Use the multi-function selector to select the spin speed you want and confirm your selection. The main menu will reappear.

Select an Extra option(s)

- Press short cut button 1. This opens the Extras sub-menu.

<table>
<thead>
<tr>
<th>Cottons Uni.</th>
<th>60°C</th>
<th>1300 rpm</th>
</tr>
</thead>
<tbody>
<tr>
<td>Extras</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Pre-wash</td>
<td></td>
<td>Back ↵</td>
</tr>
<tr>
<td>Starch stop</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Rinse hold</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

- Use the multi-function selector to select the Extra you want and confirm your selection. The main menu will reappear. Repeat the process if you want to select another extra. See "Extras" for more information.
Saving a favourite programme

You can programme the short cut buttons to call up the four wash programmes you use most frequently. The Save option must be activated via the Settings/Supervisor level menu before the short cut buttons can be programmed.

Cottons Uni. 40°C 1300 rpm
Pre-wash
Duration: 1:02 h
Extras Timer Save Back

Press short cut button 3.

Selecting a short cut button

Cottons Uni. 40°C 1300 rpm
Previous: Cottons Uni. 60°C
Extras: None 1300 rpm
Save to 1 2 3 4 Back

Use the multi-function selector to select the number you want to save the programme to, and confirm your selection. Your settings have now been saved and the favourite programme will appear in the entry menu.

Repeat the procedure if you want to customise other favourite programmes, and save them to short cut buttons which have not yet been used.
Extras

You can use the *Extras* option to augment the basic wash programs.

To open the *Extras* sub-menu

Press short cut button 1. This opens the *Extras* sub-menu.

Select an Extra option(s)

Use the multi-function selector to select the Extra you want and confirm your selection.

- Repeat the process if you want to select another Extra.
- A tick will appear to show that an Extra has been selected.

**Pre-wash**

For laundry with large amounts of dirt (e.g. dust, sand).

**Starch stop**

Water is drained out of the machine before the last rinse and the programme stops.

The programme can be continued once starch has been added to the laundry in the drum. For more information about this see "Detergent - Adding starch separately".
Rinse hold

The laundry is not spun after the last rinse and remains suspended in the final rinse water. This reduces creasing if the laundry is not going to be removed from the drum immediately after the end of the programme.

Intensive*

For heavy soiling or where staining is visible.

The duration of the main wash and of the rinses is increased.

Water plus*

The machine is set at the factory so that the water level in the main wash and rinses will be increased if the Water plus extra option is selected.

However, you can select other settings for Water plus. See the separate booklet "Commissioning, Programme chart and Settings” supplied with the machine for details under "Settings/Supervisor level”.

*Intensive und Water plus have to be set in the Settings/Supervisor level menu, as described in the booklet "Commissioning, Programme chart and Settings".

Any extras that are available for a programme will be listed in the Extras sub-menu. If an extra is not displayed, it is not available for use with the programme selected.
Timer

The timer can be used to select the time you want the programme to finish. The start of a programme can be delayed from 30 minutes up to a maximum of 24 hours.

To open the Timer sub-menu

Press short cut button 2 below the word Timer. This opens the Timer sub-menu.

To select a delay start time

You can enter the end time for a programme in 30 minute stages.

Use the multi-function selector to select the programme end time and confirm your selection. The programme end time will be adjusted to the next full or half hour. The start of the programme will now be delayed in parallel with the programme end time you have selected.

To start the timer

Press the Start button. The delay start time will be shown counting down in minutes.

To cancel the timer

Press short cut button 4.

The actual load size can only be determined accurately by the machine once the programme has started. This can cause the finish time for the programme to vary.
Maximum final spin speed

The maximum final spin speed will depend on the programme chosen.

You can reduce the final spin speed. However, you cannot select a final spin speed higher than that permitted for the programme selected.

Rinse and interim spin

There is a spin after the main wash and between the rinses. A reduction in the final spin speed will also reduce the interim spin speed.

To omit the final spin (Rinse hold)

- Select *Rinse hold* from the *Extras* sub-menu. The laundry will not be spun and will remain suspended in the final rinse water. This reduces creasing if the laundry is not going to be removed from the drum immediately after the end of the programme.

  - **To start the final spin:**
    - The Spin speed is highlighted in the display.
    - Start the final spin by pressing the Start button.
    - You can alter the spin speed.
    - Press the multi-function selector and change the spin speed shown.
    - Then confirm your choice. The spin will start straight away.

  - **To end the programme:**
    - Press short cut button \[4\] *Cancel.* The water will drain away.
    - Open the drum door.

To omit the spin between rinses and the final spin

- Select *Without spin* from the Spin speed sub-menu. The water will be pumped away after the last rinse cycle.
Payment system

Credit will be lost if the programme cancelled after it has started.

Interrupting a programme

You can interrupt a programme which is in operation at any time.

- Switch the machine off with the On/Off button.

To continue with the same programme:

- Switch the machine back on with the On/Off button.

- Confirm the message shown in the display and press the Start button.

To cancel a programme

You can cancel a programme at any time after it has started:

The suds will be pumped away.

- Open the drum door before starting a new programme.

Changing a programme

- After starting a programme you can change the spin speed at any time up until the final spin commences and you can select or deselect the Starch stop and Rinse hold extras.

- You can change the temperature and select or deselect the Intensive and Water plus options during the first 5 minutes of a programme.

You will not be able to change or cancel the programme or to open the door if

- a Disinfection programme is running.

- A payment system is connected to the machine (depending on setting it may be possible to cancel a programme. See Settings Coin mechanism lock.)
Detergent dispensing

Please follow the detergent manufacturer’s instructions.

Instructions for use and recommended amounts for a full load are given on the detergent packaging.

The right amount to dispense will depend on the following:

– The size of the load
– The soiling level of the load
– The water hardness level.

Check with your local water supplier if you do not know the hardness level in your area.

The water hardness level

<table>
<thead>
<tr>
<th>Hardness-range</th>
<th>mmol/l</th>
<th>gr/gal</th>
</tr>
</thead>
<tbody>
<tr>
<td>I (soft)</td>
<td>0 - 1.5</td>
<td>0 - 8.4</td>
</tr>
<tr>
<td>II (medium)</td>
<td>1.5 - 2.5</td>
<td>8.4 - 14</td>
</tr>
<tr>
<td>III (hard)</td>
<td>Above 2.5</td>
<td>Above 14</td>
</tr>
</tbody>
</table>

Water softeners

A water softener can be used to cut down on the use of detergents in hard water areas. Dispense according to the amount specified on the packaging. First add detergent and then the water softener.

Use a quantity of detergent as for soft water.

Washing with several components

If you wash using several components (e.g. special application detergents), we recommend always dispensing the agents into compartment [□] in the following order:

1. Detergent
2. Water softeners
3. Stain remover

This way the agents are distributed more evenly.

Colour run and dye removers/dyes

Do not use colour run or dye removers in this machine.

Dyes suitable for use in a washing machine can be used. However, please note that the salt used in the dyeing process can cause corrosion to stainless steel components in the machine if you dye frequently. Always observe the manufacturer’s instructions carefully.
Fabric conditioners, liquid starch and starch formulations

Dispense according to the amount specified on the packaging.

Automatic dispensing of fabric conditioner or liquid starch to laundry at the end of a programme

- Add the fabric conditioner or liquid starch to compartment  

It will be automatically dispensed in the last rinse. At the end of the programme a small amount of water remains in the fabric conditioner compartment  .

Adding fabric conditioner or liquid starch separately

- Add fabric conditioner or liquid starch to compartment .
- Select the Extra rinse programme.
- Press the Start button.

Adding starch separately

- Prepare the starch solution in accordance with manufacturer's instructions on the packaging.
- Add the prepared starch to compartment  .
- Select the Starch programme.
- Press the Start button.

Adding starch separately using Starch stop

- Prepare the starch solution in accordance with manufacturer's instructions on the packaging.
- Before starting a programme select the Starch stop extra option. The programme and the “time left” indicator will pause before the last rinse. Starch stop will appear in the display.
- Open the drum door and add the prepared starch to the laundry in the drum.
- Close the drum door.
- Select and confirm a spin speed, or press the Start button.

If starching frequently, thoroughly clean the dispenser compartment, especially the siphon tube and fabric conditioner channel, regularly. See "Cleaning the detergent dispenser drawer". Do not use powder starch formulations or viscous liquid starch in the  compartment as it will clog up. See below.
External dispensing system

The machine is fitted with an adapter for an external dispensing system. Up to six dispensing hoses (not supplied) can be connected to the machine. The external pumps are controlled by relays in the machine. Each relay is switched on for 2 minutes at a time.

A separate connection box for electrically controlling the dispensing pumps is required, and must be fitted by a Miele service technician.

The relays are controlled as described in the separate booklet "Commissioning, Programme chart and Settings" supplied with the machine. The containers must be filled with the correct detergent or disinfectant in the order specified.

Empty sensor

When the Empty sensor is activated, a message appears in the display to show when an external liquid agent container is empty (see Settings/Supervisor level in the separate booklet "Commissioning, Programme chart and Settings" supplied with the machine).

If a container is empty, the following message will come up in the display before the start of the programme or whilst the programme is running:

```
<table>
<thead>
<tr>
<th></th>
<th>Fill the container</th>
</tr>
</thead>
<tbody>
<tr>
<td>OK</td>
<td></td>
</tr>
</tbody>
</table>
```

A programme that has already been started continues to run until it has finished.

- Press short cut button [1] to delete the message in the display, and refill the container.
If a *Disinfection programme* is running, the following message is displayed:

![Fault Container empty]

The programme will be cancelled.

- Press short cut button 1 to delete the message in the display, and refill the container.
- Start the programme again.

⚠️ If the container is empty for a disinfection programme, you have to assume that no disinfection has taken place. Start the programme again.
Cleaning and care

Disconnect the machine from the mains electricity supply.

Cleaning the machine

Do not use solvents, abrasive cleaners, glass cleaners or all-purpose cleaning agents. These might damage plastic surfaces and other components because of the chemicals they contain.

Casing and control panel

- Clean the casing and the control panel with a mild non-abrasive detergent or soap and water. Wipe dry with a soft cloth.
- Stainless steel areas can be cleaned using a suitable proprietary stainless-steel cleaning agent following the manufacturer's instructions on the packaging.
- The machine must not be hosed down.

Cleaning the drum, suds container and drainage system

The drum, suds container and drainage system can be cleaned if necessary.

- Start the Maintenance programme.
- At the end of the programme check the inner drum and remove any coarse residues.

If you use disinfection programmes on a regular basis, the Maintenance programme should be carried out frequently.
Cleaning and care

Cleaning the detergent dispenser drawer
Remove detergent residues regularly.
There is a yellow lever behind the detergent drawer fascia panel.

- Remove the lever.

- Pull the detergent drawer out as far it will go.
  1. Then press the safety catch down using the lever as illustrated.
  2. Then pull the detergent drawer out.
- Clean the drawer with warm water.
Clean the siphon.

1. Remove the siphon from compartment and rinse under warm running water. Clean the siphon tube in the same way.

2. Replace the siphon.

- Clean the fabric conditioner channel using a brush and warm water.

---

**If starching frequently, thoroughly clean the siphon, the siphon tube and the fabric conditioner channel regularly. A build-up of liquid starch will cause it to get clogged.**

**Cleaning the detergent dispenser drawer housing**

- Use a bottle brush to remove detergent residues and limescale from the jets inside the detergent dispenser drawer housing.
Cleaning and care

Cleaning the water inlet filters
The machine has two filters to protect the water inlet valve. These filters should be checked every six months or so, or more often if there are frequent interruptions to the external water supply.

To clean the filter in the inlet hose:
- First turn off the stopcock.
- Unscrew the threaded union connecting the free end of the inlet hose to the stopcock.
- Remove the rubber seal 1 from the recess.
- Using pointed pliers, take hold of the plastic filter bar 2 and remove.
- Clean the plastic filter.
- Put the filter and seal back in the reverse order and reconnect the hose.

Turn on the stopcock and check the connection is watertight. If water drips out, tighten the connection.

To clean the filter in the water inlet valve:
- Using pliers, carefully loosen the ribbed plastic nut on the inlet valve and unscrew.
- Use pointed nose pliers to withdraw the plastic filter by the bar (see illustration). Clean, put back and secure.

The two filters must be re-assembled after cleaning.
What to do if . . .

With the help of the following notes, minor faults in the performance of this machine, some of which may result from incorrect operation, can be put right without contacting the Service Department.

You should, however, note the following:

⚠️ Repair work to electrical appliances should only be carried out by a Miele Service Technician in strict accordance with current local and national safety regulations. Repairs and other work by unqualified persons could be dangerous. The manufacturer cannot be held liable for unauthorised work.

---

### The programme does not start

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible cause</th>
<th>Remedy</th>
</tr>
</thead>
</table>
| The display remains dark. | There is no power to the machine. | Check whether  
  - the electricity supply to the machine is switched on.  
  - the fuse or circuit breaker has tripped. |
| The programme does not start when *Spin* has been selected. | The machine has not been prepared for using for the first time. | Run the *Cottons Universal 60°C* programme as described "Commissioning the machine" in the separate booklet "Commissioning, Programme chart and Settings" supplied with the machine. |
| The display is dark and the *Start* button is flashing slowly. | The display has switched off automatically to save energy (Standby mode). | Press one of the short cut buttons. The machine comes out of standby mode. |
## Problem solving guide

### A fault message appears in the display

### Problem solving guide

#### An unsatisfactory wash result

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible cause</th>
<th>Remedy</th>
</tr>
</thead>
</table>
| **Liquid detergent does not give the required result.** | Liquid detergents usually contain no bleaching agents. They do not remove fruit, coffee and tea stains. | - Use a general purpose detergent containing a bleaching agent.  
- Pour stain removers into compartment [U] of the dispenser drawer and liquid detergent into a dispenser ball.  
- Never put stain removers and liquid detergent together in the dispenser drawer. |
| **Grey, greasy particles cling to washed laundry.** | Insufficient amounts of detergent were used to break down the particles of grease in heavily soiled laundry. | - For this kind of soiling use either more detergent or liquid detergent.  
- Before washing the next load run a Cottons 60°C programme with liquid detergent but without a load. |
| **White residues which look like powder detergent are seen on dark textiles after washing.** | The detergent contained compounds (zeolites) to aid water softening which are not soluble in water. They have ended up on the laundry. | - Try and brush off the residues with a soft brush once the laundry is dry.  
- Wash dark textiles using a detergent which contains no zeolites. Liquid detergents usually contain no zeolites. |
| **Textiles have particularly greasy soiling.** | - Select a programme with pre-wash. Use a liquid detergent for the pre-wash and a powder detergent for the main wash. The use of heavy-duty detergent is recommended in the main wash for very heavily soiled work clothing. Consult detergent producers for advice. | |
## Problem solving guide

### The door will not open

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>The door is locked after a programme has been cancelled.</td>
<td>For safety reasons the drum door cannot be opened if the suds temperature is higher than 50°C. Wait until the machine has cooled down.</td>
</tr>
<tr>
<td>The door will not open at the end of a wash programme.</td>
<td>Press against the door handle, switch the machine off and then back on again. Then pull on the door handle again.</td>
</tr>
<tr>
<td>There is still water in the drum and the machine is unable to drain.</td>
<td>The drainage system may be blocked. Clean the drainage system as described in the next section.</td>
</tr>
<tr>
<td>If you still cannot open the door:</td>
<td>The door handle has a safety device to prevent damage to the lock. Press firmly against the door handle until you clearly hear the safety device engage.</td>
</tr>
</tbody>
</table>

### To continue a programme after a power cut

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power cut.</td>
<td>Confirm the message shown in the display by pressing short cut button 1  and then press the Start button. The programme will then continue with the next programme stage.</td>
</tr>
<tr>
<td>Switch the machine off and then back on again with the On/Off button.</td>
<td></td>
</tr>
</tbody>
</table>
Problem solving guide

Peak load

When the peak load function is activated, the heating will turn off and the programme is stopped. The following message appears in the display:

<table>
<thead>
<tr>
<th>Cottons</th>
<th>60°C</th>
<th>1300 rpm</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hygiene</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Main wash</td>
<td></td>
<td>0:43 h</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Peak load</td>
</tr>
</tbody>
</table>

After the peak load function is deactivated the programme will continue automatically.

Display Service

If the following message appears in the display after "Poweron", Miele Service needs to perform a routine maintenance.

Press the short cut button 1, or wait approx. 5 seconds, the display will revert to the main menu.
Opening the drum door in the event of a blocked drain outlet and/or power failure

⚠ Disconnect the machine from the mains electricity supply.

There is a lever behind the detergent drawer fascia panel which opens the access flap to the drain system.

- Remove the lever.
- Use it to open the access flap.

Drain the machine.

If the drain outlet is clogged, a large amount of water will be retained in the machine (up to 35 litres).

⚠ Caution: if laundry has been washed at a high temperature, water draining out of the machine will still be hot. Danger of scalding.

... Machines with a drain filter

- Place a suitable container under the access flap.

When draining water from the machine, do not unscrew the drain filter completely or take it right out.

- Slowly and carefully unscrew the drain filter to let the water out.

If you need to interrupt the flow of water:

- Tighten the drain filter back up again.
Problem solving guide

Once the flow of water ceases:

- Remove the drain filter completely.

Cleaning the drainage system

- Clean the drain filter thoroughly.

- Remove any foreign objects (e.g. buttons, coins, etc.) and fluff from the filter housing. Turn the impeller by hand to check that it rotates freely.

- Put the drain filter back in place and secure it.

⚠️ Make sure the drain filter is securely tightened. Otherwise there is a risk of water leakage during use.

... Machines with a dump valve

- Push the emergency drain lever downwards (see illustration) and hold until no more water runs out.
Opening the drum door

⚠ Always make sure that the drum is stationary before reaching into the machine to remove laundry. Reaching into a moving drum is extremely dangerous.

- Insert a suitable screwdriver (approx. 4 mm blade) into the opening next to the door lock and use it to release the catch. Turning it slightly in an anti-clockwise direction should release the door.

- Open the door with the handle.

⚠ Do not use force to open it.
After sales service

Repairs
In the event of any faults which you cannot remedy yourself, or if the machine is under guarantee, please contact:

- the Miele Service Department (see back cover for contact details).

When contacting the Miele Service Department, please quote the model and serial number of your machine, both of which are shown on the data plate visible above the porthole glass when the drum door is open.

PC / Optical interface
The indicator or check light marked **PC** on the fascia panel is the interface used by Miele service technicians during servicing work for testing purposes and for updating the machine's programme data.

Optional accessories
Optional accessories for this machine are available from Miele Professional.
Front view

1. Inlet hose (cold water)
2. Inlet hose (hot water)
3. Mains connection cable
4. Control panel
5. Detergent dispenser drawer
6. Door with handle
7. Access to drain filter, drain pump or dump valve
8. Height adjustable feet
Installation

Rear view

1. Mains connection cable
2. Installation shaft for communication module
3. Valve for recycled water
4. Inlet hose (hot water)
5. Inlet hose (cold water)
6. Adapter for external dispensing system
7. Drain hose (for machines with drain pump)
8. Transit bars
9. Drain pipe (for machines with dump valve)
10. Restraining clip for inlet hose and drain hose
Installing the machine

- Transport the machine to its installation site.

⚠️ Ensure the machine is stable during transportation.

⚠️ Do not lift the machine by the drum door.

⚠️ The machine is not suitable for building under a worktop.
Installation

Installation on an raised plinth

The machine can be installed on a steel plinth base* (available open or closed) or on a concrete plinth.

⚠️ If the machine is installed on an on-site concrete or brick plinth, it **must** be secured using clamps. Otherwise there is the danger of the machine moving and falling off the plinth during spinning.

- Secure the front feet of the machine with the clamps supplied.
- Follow the fitting instructions supplied.

Payment system

This machine can be fitted with a payment system.*

The payment system can be set up by the Miele service technician when the machine is commissioned.

Coins / tokens must be removed from the payment system regularly, otherwise it will become blocked.

* These can be obtained from the Miele Spare Parts department.
Installation surface

⚠️ Do not install the machine near or directly above an open gully or floor drain. Moisture from these can penetrate the machine and damage the electric components.

⚠️ Ensure that the machine feet and the floor are dry to prevent the machine from slipping during the spin cycle.

A concrete floor is the most suitable installation surface for a washing machine, being far less prone to vibration during the spin cycle than wooden floorboards or a carpeted surface.

- The machine must be level and securely positioned.
- To avoid vibrations during spinning, the machine should not be installed on soft floor coverings.

If installing on a wooden joist floor:

- We recommend a plywood base (at least 69 x 77 x 3 cm). The base should span several joists and be bolted to the joists and not only to the floorboards. Check for the presence of pipes and cables first.

If possible, install the machine in a corner, as this is usually the most stable part of the floor.

Removing the transit bars

- Release the catch and turn the left hand transit bar clockwise by 90°.
- Then withdraw the transit bar.
Release the catch and turn the right hand transit bar anti-clockwise by 90°.

Then withdraw the transit bar.

To avoid the risk of injury the holes for the transit bars must be covered after they have been removed. If they are not covered there is a risk of injury.

Plug the holes with the plastic caps supplied.

The machine must not be moved without the transit bars in place. Store them as shown or keep them in a safe place for future use. They must be re-fitted if the machine is to be moved again (e.g. when moving house).

When moving the machine make sure it is stable.

Re-fitting the transit bars

Re-fitting is carried out by reversing the procedure.
**Levelling the machine**

Ensure that the machine feet and the floor are dry to prevent the machine from slipping during the spin cycle.

⚠️ The machine must stand perfectly level on all four feet to ensure safe and proper operation.

Incorrect installation may increase electricity and water consumption and may cause the machine to move about.

**Screwing out and adjusting the feet**

The four adjustable screw feet are used to level the machine. All four feet are screwed in when the machine is delivered.

- Use a spirit level to check the machine is standing level.
- Hold foot 1 securely with a pipe wrench. Turn counter nut 2 again using the spanner supplied until it sits firmly up against the housing.

⚠️ All four counter nuts must sit firmly up against the housing. Please also check this for the feet which did not need adjustment. Otherwise there is the danger of the machine moving about.

- Using the spanner supplied, turn counter nut 2 in a clockwise direction. Then turn counter nut 2 together with foot 1 to unscrew.
Installation

Plumbing

The machine is built in accordance with current standards and must be connected to a mains water supply in accordance with local and national safety regulations.

The machine is designed to operate with a flow pressure of between 100 kPa and 1,000 kPa (14.5 psi and 145 psi). At higher water pressures it is essential to fit a reducer valve.

Connection to the water supply should be carried out by a qualified plumber and should incorporate a stopcock with a 3/4" thread. The stopcock should be fitted by a qualified plumber.

The machine is supplied as standard with two hoses, for connection to a hot and cold water supply.

Connection to the cold water supply

The cold water inlet hose (blue stripes) must be connected to the on-site cold water supply via a 3/4" threaded union. It is not suitable for connection to a hot water supply.

⚠️ The connection point is subject to mains water pressure. Turn on the stopcock slowly and check for leaks. Correct the position of the washer and union if appropriate.

Maintenance and care

Only use a genuine Miele hose should you ever need a replacement. Miele hoses are tested to withstand pressure of at least 7,000 kPa (1,015 psi).

In order to protect the water inlet valve, the two dirt filters - one in the open end of the inlet hose, one at the inlet point in the machine - must not be removed.

Extension hose

Longer hoses 2.5 or 4.0 m in length are available from the Miele Spare Parts Department as optional extras.
Connection to the hot water supply

To keep electricity consumption costs down this machine can be connected to a (ring) piped hot water supply, max. temperature 70°C. It is not economical to run it from an individual hot water supply if it is not in continuous use, as the water in the supply pipes cools down and more energy would be required to reheat the water. For hot water connection the same conditions apply as for cold water connection.

The inlet hose with the red stripes (hot water hose) is connected to the stopcock.

For operational reasons the machine must not be connected to hot water only.

If the machine is not connected to a hot water supply, the hot water inlet hose must be disconnected and the water settings for the main wash, pre-wash and rinses must be reprogrammed.

- Select the cold option in the Settings menu/Supervisor level menu.

The programme durations may be longer.

- Disconnect the hot water hose (hot water - red stripes)
- Plug the inlet hole with theblanking cap supplied.

Recycled water connection

This machine can be connected to a recycled water supply.

- Unscrew the blanking cap from the recycled water valve.
- Connect the additional inlet hose to this valve.

The main wash and rinses water settings must then be set as appropriate.

- Go to Settings menu/Supervisor level menu and select the Recycled water option.

Connection to a very hot water supply

It is possible to connect the machine to a very hot water supply, 70°C to a maximum of 85°C. A special inlet hose is required. The machine must also be reprogrammed by a Miele service technician.
Installation

Water drainage

Dump valve version

A motorised dump valve is used to drain the machine. A DN 70 angle connector can be used for draining the machine via an on-site gully (with odour trap). N.B. If not supplied with the machine, an angle connector is available to order from Miele.

Machines with a drain pump

The machine drains via a drain pump with a delivery head of 1 metre*. The drain hose must not be kinked as this restricts drainage. The swivel elbow at the end of the hose can be turned in either direction, or can be detached if required, with a sharp twist and pull.

Drain hose connection:

1. Connected securely to a plastic drain pipe with a rubber nipple. There is no need to use a non-return valve.

2. Connected securely to a standpipe.

3. Connected securely to a floor gully.

If required, the drain hose can be extended to a length of 5 m. The necessary parts can purchased from the Miele Spare Parts Department.

* For a delivery head of more than 1 m (up to a max. of 1.6 m) a second duo-drain pump is available with the corresponding kit from the Miele Spare Parts Department.
**Electrical connection**

This machine is supplied with a connection cable and a NEMA L15-30P plug.

⚠️ The voltage, rated load and fuse rating are given on the data plate. Please ensure these match the site mains supply.

Connection to the electricity supply must only be carried out by a suitably qualified and competent person, in strict accordance with current local and national safety regulations.

Connection should be made via a suitable connection socket or isolator which complies with local and national safety regulations and which is easily accessible for disconnecting the machine from the electrical supply.

If the appliance is hard wired, provision must be made on site to switch off all poles. Switches with a minimum all-pole contact gap greater than 3 mm are suitable for isolating the machine. These include circuit breakers, fuses and relays (IEC/EN 60947).

⚠️ If the machine is disconnected from the electricity supply ensure adequate measures are taken to ensure that the machine cannot be reconnected to the electricity supply until all work has been carried out.

Should the connection cable require replacing or changes be necessary in the electrical installation including checking and/or replacing the fuse please make sure this is done by an approved electrician to ensure compliance with all local and national electrical safety requirements.

For extra safety and protection we recommend connecting the machine by a 30mA residual current device (RCD).

⚠️ WARNING: THIS APPLIANCE MUST BE EARTHED
